

#3 - Substance Abuse:

In July 2009, the state training team had a "training of trainers" from the Dept of Health. The topic of the training was, "Fetal Exposure From Maternal Substance Abuse." The regions will all deliver this training to regional Child and Family Services staff by July 2010. The training covers a good deal of information about the various substances and their potential impact on a fetus. This includes legal drugs such as alcohol and tobacco.
